

THE EXPERTS CARAVAN

Basic Caravans 20ft \$35,000 ex-Factory (26ft \$52k, 37ft \$79k)

[READ MORE](#)

26 foot / dual axle

Expert Caravaners know exactly how they want their caravans to be specced up. The brands of accessories, the exact models, how they are fitted, how they are configured.

They usually spend a huge amount of time finding the van that matches their preferences best, but an exact match is almost impossible to find.

Furthermore, when adding extra features to that van and it is a nightmare to get in, out, and around the walls, doors and joinery of that preconfigured van because of the way it is constructed, and because the joinery is an integral part of the structural integrity of the van.

This problem has now been solved.

You can now buy a simple Exo Skel "Hammervan" and fit it out yourself exactly how you want it.

Many years of research and development has gone in to this totally revolutionary way caravans are made.

A Hammervan is far stronger than any other caravan on the market – yet at the same time, far easier to work on and modify than any other caravan on the market.

The Hammervan "ExoSkel" has a welded 50 x 100 Alum frame that means its structure is totally self supporting, not to mention infinitely stronger than any other caravan on the market.

All the other methods of making a caravan rely on the joinery and walls to support the structure of the caravan, which means the layouts are set and fixed from the day of manufacturing.

Further the wall sections on a Hammervan "ExoSkel" are all removeable with the undoing of a few simple bolts. This means that for the first time it is easy to retrofit accessories or add ons to a caravan

This enables you to buy a basic caravan with no locked in layout and do all the internal features yourself, or get a local caravan maintenance business to do it for you. Your options, with your brands, done how you want, when you want.

Basic 20 footers are \$35,000
(Single Axle, 2.5t GVM)

Basic 26 footers are \$52,000
(Dual Axle, 3.25t GVM)
